

# PART NO. 67545

## Instruction Sheet

Install video:

## REAR CAMBER ARM

*This part should only be installed by personnel who have the necessary skill, training and tools to do the job correctly and safely. Incorrect installation can result in personal injury, vehicle damage and / or loss of vehicle control.*

*Plan Ahead - Read All Instructions BEFORE installing part*

Check for loose or worn parts, proper tire pressure, and odd tire wear patterns before beginning alignment.

**SPC EZ Arm™ 67545 allows rear camber change up to  $\pm 1^\circ$  on its own. If more than  $\pm 1^\circ$  camber change is required, toe arm 67555 and/or setback arm 67550 may be required. Also see (3) EZ Arm™ set 67540.**

**NOTE: Toe will change as you adjust camber using control arm 67545.**

1. Raise vehicle by body and support properly. Remove tire and wheel assembly.
2. Remove bolts holding most rearward arm in place. Remove OE arm.
3. Adjust EZ Arm™ to approximately the same length as OE arm.

**NOTE: Ensure equal thread is showing on either side of hex adjuster when pre-setting arm.**

4. Install EZ Arm™ using OE bolts and supplied nuts and lightly tighten both nuts.

**WARNING: Tightening fasteners with vehicle in raised position may cause premature bushing failure.**

5. Replace wheel and tire assembly. Lower vehicle.
6. Adjust camber by turning hex adjuster to achieve desired camber specification. Camber adjustment range is limited by rear toe adjustment.

**NOTE: Maximum length of arm is reached when flat on either rod is visible at end of hex adjuster. DO NOT lengthen arm beyond this point. Exceeding the range of adjustment of these arms may cause the arm to fail and void warranty.**

7. After adjustment is complete, tighten jam nuts against hex adjuster. Torque mounting bolts to manufacturer's specifications.
8. Complete vehicle alignment and road test vehicle.

**Always check for proper clearance between suspension components and other components of vehicle.**
