2. Locate the rivets that mount the carrier bearing frame crossmember to the driver's and passenger's frame rails. There will be four rivets on each side.
3. Support the crossmember with a hydraulic jack and remove the 8 rivet heads with a grinder, air chisel, or drill. Drive the remainder of the rivet out with a hammer and punch.
4. In some cases the OE holes may need to be drilled out to accept the provided 7/16" x 2-1/2" bolts, nuts and washers.
5. Bend back the retaining tabs located on the top of the crossmember that hang over the lip of the frame rails to allow the crossmember to be lowered.
6. Lower the crossmember just enough to allow for the four provided spacers to be installed between the crossmember and the frame rails. Retain the spacers with 7/16" hardware provided. Torque bolts to 45 ft-lbs.
7. Check hardware for proper torque after 500 miles.
